

Sample Assessment Paper for Admission to **Grade III**

English

Read the given text carefully and answer the questions that follow.

Drones

A drone is a robot. Some drones are as big as aeroplanes but some are so small they can fit on your hand. Some drones have wings so they can fly like a plane. Some drones have rotors so they can fly like a helicopter.

Many drones carry cameras. The cameras send videos to the controller, so the controller knows where the drone is.

All drones are controlled by a computer. Sometimes the computer is a long way from the drone. When drones fly into dangerous places, the controller can be sitting in a safe place with a computer.

Most small drones and toy drones are controlled by a smaller computer which the controller holds in their hands.

Q1. Circle the correct answer.

a. What is a drone?

- i. a bird ii. a robot iii. a car

b. Some drones can fly like a plane because they have...
